001	RFICDT	Date of Informed Consent	Using DS dataset - get RFICDT as the numeric(datepart(DSSTDTC)) on the record where DSCAT="PROTOCOL MILESTONE" and DSSCAT="INFORMED CONSENT OBTAINED" and DSDECOD="SUBJECT INFORMED CONSENT".
002	RANDDT	Date of Randomization	Using DS dataset - get RANDDT as the numeric(datepart(DSSTDTC)) on the record where DSCAT="PROTOCOL MILESTONE" and DSDECOD="RANDOMIZED".
003	TRTSDT	Date of First Exposure to Treatment	Using EX dataset - get TRTSDT as the numeric(datepart(EXSTDTC)) of the earliest record of a subject where EXCAT="TREATMENT PERIOD". Details: Subset the records from EX with the above given condition and sort by USUBJID and EXSTDTC and pick the earliest non-missing date.
004	TRTEDT	Date of Last Exposure to Treatment	Using EX dataset - get TRTEDT as the numeric(datepart(EXENDTC)) of the latest record of a subject where EXCAT="TREATMENT PERIOD". Details: Subset the records from EX with the above given condition and sort by USUBJID and EXENDTC and pick the latest non-missing date.
005	SCRFFL	Screen failure Population Flag	Create this flag using the data collected in DS dataset. If a subject has a record in DS dataset with the condition DSDECOD="DID NOT MEET ENTRANCE CRITERIA" then the subject would be called a screen failure. Populate this flag as 'Y' for all the screen failure subjects. For the rest of the subjects the flag will be populated as 'N'.
006	RANDFL	Randomized Population Flag	Create this flag using the data collected in DS dataset. If a subject has a record in DS dataset with the condition DSCAT="PROTOCOL MILESTONE" and DSDECOD="RANDOMIZED" then subject would be called as randomized, else the subject would be called non-
