SAS Program

R Program

As part of lab data, LDL cholesterol and HDL cholesterol are collected over different timepoints

For analysis purposes, lets assume that we need to summarize the changes in the ratio of HDL to LDL over time

As per ADaM standard, when analysis result required is a function of two or more parameters, then new set of rows have to be created with a new parameter name.

So, we will create a new parameter named 'HDL LDL Ratio (Ratio)' to meet analysis requirements

LDL	
LDL	
LDL	
HDL	
HDL	
HDL	
HDL LDL Ratio	
HDL LDL Ratio	
HDL LDL Ratio	
HDL LDL Ratio
