ROWORDER [▲]	VARIABLE_NAME [▾]	VARIABLE_LABEL [▾]	DERIVATION [▾]
001	ADT	Analysis Date	A. For the source parameters: Extract date portion from LBDTC and convert it to numeric B. For the derived parameters, retain it from the corresponding source records
002	PARAM	Parameter	A. For the source parameters: Set to LBTEST " (" LBSTRESU ") B. Create a derived parameter 'HDL LDL Ratio (Ratio)' using the source parameters 'HDL Cholesterol (mmol/L)' and 'LDL Cholesterol (mmol/L)'
003	PARAMCD	Parameter Code	A. For the source parameters: Set to LBTESTCD, B. For the derived parameter "HDL LDL Ratio (Ratio)" set to 'HDL LDL'
004	AVAL	Analysis Value	A. For the source parameters: Set to lbSTRESN B. For the derived parameter 'HDL LDL Ratio (Ratio)': 1. Transpose the data such that LDL and HDL values at a timepoint are present as columns (say,LDL and HDL respectively) 2. Create AVAL as (HDL/LDL). 3. Round the AVAL to two decimals
