ROWORDER	VARIABLE_NAME	VARIABLE_LABEL	DERIVATION
001	General	General notes	This example is intended to show the creation of average record of triplicate measurements collected in ECG. Input data used for this lesson already some derived variables created. (PARAMCD, PARAM, ADT, ATM, AVISITN, AVISIT, AVAL). We will create a additional for average and append to the parent dataset
002	DTYPE	Derivation Type	Create a new record to store the average of the triplicate measurements collected on a day within each parameter and subject. Round the result to two decimals in AVAL on this newly created record. Set DTYPE to "AVERAGE" on this newly created record.
