Lesson Description

[Site](#) [SAS Video](#) [SAS Program](#) [R Program](#)

Background

- Lets say that one or more collections is possible prior to treatment start
- We want to use the latest available result to compare it with the post treatment assessments
- So, we flag the latest available result record with Y in ABLFL variable

SYSBP		
SYSBP		Y

What is covered in this lesson

In this lesson,

- We will see how to identify the pre-treatment records
- How to identify the latest record
- How to use the information present on latest record to populate ABLFL as Y in parent dataset
