

Concept Description	Spec	SAS Program	SAS Data	R Program	R Data
---------------------	------	-------------	----------	-----------	--------

Background
• In some clinical trials, we may have to collect data about diagnosis of the cause of death for a subject • Some example data points are: ◦ Autopsy Indicator ◦ Hospitalized at Time of Death Indicator ◦ Information Source for Cause of Death ◦ Location of Death ◦ Primary Cause of Death ◦ Secondary Cause of Death • SDTM standard has a standard domain for capturing these findings - "Death Details (DD)" • DD dataset belongs to Findings class and has an expected record structure of 'One record per finding per subject'
What type of information is typically collected or presented?
• Date of assessment • Short name of the test • Name of the test • Result/finding ◦ in original units ◦ in standard units • Evaluator of the response/finding
