Roworder	variable_name	variable_label	derivation
001	General		Electrocardiogram information is collected in ecg dataset. So, this dataset becomes the base input dataset for creating SDTM.EG dataset. The information related to the tests performed are collected as variables in the input datasets. As the expected structure for SDTM EG domain is one record per subject per test per timepoint, we need to transform the test results and other dependent variables from horizontal to vertical structure.
002	STUDYID	Study Identifier	raw.ecg.STUDY
003	DOMAIN	Domain Abbreviation	Set to "EG"
004	USUBJID	Unique Subject Identifier	Concatenate STUDY and PT variable values using hyphen as separator
005	EGSEQ	Sequence Number	Sort the final dataset by USUBJID, EGCAT, EGTESTCD, EGDTC and set to 1 on the first record of the subject and increment by 1 on subsequent records.
006	EGTESTCD	ECG Test or Examination Short Name	Set to "HR" for the rows representing result from raw.ecg.HR_RAW Set to "PR" for the rows representing result from raw.ecg.PR_RAW Set to "QT" for the rows representing result from raw.ecg.QT_RAW Set to "QRS" for the rows representing result from raw.ecg.QRS_RAW Set to "QTC" for the rows representing result from raw.ecg.QTC_RAW Set to "INTP" for the rows representing result from raw.ecg.EGINTP.
007	EGTEST	ECG Test or Examination Name	Set to "Heart Rate" when EGTESTCD="HR" set to "PR Interval" when EGTESTCD="PR" set to "QT Interval" when EGTESTCD="QT" set to "QT Interval Corrected" when EGTESTCD="QTC" set to "QRS Interval" when EGTESTCD="QRS" set to "Interpretation" when EGTESTCD="INTP"
008	EGCAT	Category for ECG	Set to "ECG"
009	EGORRES	Result or Finding in Original Units	raw.ecg.HR_RAW for EGTESTCD="HR", raw.ecg.PR_RAW for EGTESTCD="PR", raw.ecg.QT_RAW for EGTESTCD="QT", raw.ecg.QTC_RAW for EGTESTCD="QTC", raw.ecg.QRS_RAW for EGTESTCD="QRS", raw.ecg.EGINTP_RAW for EGTESTCD="INTP"
© 2014–2026 Copyright: www.mycsg.in			
			"ABNORMAL" and when raw.ecg.EGINTP="Normal" then set to "NORMAL" for EGTESTCD="INTP"
010	EGORRESU	Original Units	Set to "msec" when EGTESTCD in ("PR" "QT" "QTC" "QRS"), set to "beats/min" when EGTESTCD="HR"
011	EGSTRESC	Character Result/Finding in Std Format	sdm.ecg.EGORRES
012	EGSTRESN	Numeric Result/Finding in Standard Units	Convert sdm.ecg.EGSTRESC to numeric value when EGTESTCD in ("HR" "PR" "QT" "QTC" "QRS")
013	EGSTRESU	Standard Units	sdm.ecg.EGORRESU
014	EGSTAT	Completion Status	Set to "NOT DONE" when sdm.ecg.EGORRES is null
015	EGMETHOD	Method of Test or Examination	raw.ecg.EGMETHOD
016	EBLFL	Baseline Flag	Set to "Y" on the latest record with non-missing result on or prior to SDTM.DM.RFSTDTC per EGTESTCD.
017	VISITNUM	Visit Number	Set to 1 when VISIT="SCREENING", Else when VISIT contains "WEEK" then add 100 to the week number (that is, WEEK 1 will have a VISITNUM of 101). Else when VISIT contains "FOLLOW-UP" then add 200 to the numeric portion of the VISIT. For Unscheduled visits, add the unscheduled visitnumber as a two digit decimal to the previous scheduled visit number. (For example, a third unscheduled visit after VISITNUM 102 will be formatted as 102.03)
018	VISIT	Visit Name	Set to "SCREENING" when FOLDER="SCR". Else when FOLDER contains "Week" then convert FOLDER to uppercase.Else when FOLDER contains "FU" then replace "FU" with "FOLLOW-UP". Unscheduled visits (FOLDER contains "UNS_") will be remapped based the previous scheduled VISIT when sorted by VSDTC. For each unscheduled visit present after a scheduled visit, concatenate the word 'UNSCHEDULED' to the previous scheduled visit followed by the number of the unscheduled padded with a leading zero. (For example, a third unscheduled visit after "WEEK 2" will be formatted as "WEEK 2 UNSCHEDULED 03")
019	EPOCH	Epoch	Derive by comparing EGDTC with the sdm.se.SESTDTC and sdm.se.SEENDTC of each element of a subject and assign the epoch based on the sdm.se.EPOCH of the element in which each event start date falls.
020	EGDTC	Date/Time of ECG	Convert raw.ecg.EGDT_RAW to ISO 8601 format.
021	EGDY	Study Day of ECG	numeric(datepart(sdm.ecg.EGDTC))-numeric(datepart(sdm.dm.RFSTDTC))+ (numeric(datepart(sdm.ecg.EGDTC))>=numeric(datepart(sdm.dm.RFSTDTC)))
022	EGCLSIG	Clinically Significant	For EGTESTCD="INTP", set to "N" when raw.ecg.EGINTP="Abnormal Not Clinically Significant" set to "Y" when raw.ecg.EGINTP="Abnormal Clinically Significant"
