Background
- Most clinical trials are conducted on outpatient basis wherein the subjects visit the trial site (clinic/hospital) only at predetermined time points or on-need basis - Subjects in such studies may have planned or unplanned hospitalization - If required, such information related to hospitalization may be collected - Some data points related to hospitalizations include: - Reason for admission - Facility to which admission is made (ER/ICU/General ward etc) - Date of admission and discharge etc. - In SDTM standard, we have a domain called "Healthcare Encounters (HO)" to collect data for inpatient and outpatient healthcare events (e.g., hospitalization, nursing home stay, rehabilitation facility stay, ambulatory surgery) etc. - HO belongs to 'Events' class and has an expected record structure of 'One record per healthcare encounter per subject'.
What type of information is typically collected or presented?
- Term described by the subject for healthcare encounter - Start date/time - Status of the encounter- ongoing or ended? - If ended, end date/time - In cases there are prespecified encounters - Encounter occurred? - Yes - No - Reason not occurred - Duration of the encounter
