Roworder	variable_name	variable_label	derivation
001	General		Laboratory tests are collected in three different datasets, lab_hema, lab_chem and lab_urin. So, these three datasets become the base input datasets for creating SDTM.LB dataset. The information related to the tests performed are collected as rows in the input datasets which is same as the expected structure for SDTM LB domain - one record per subject per test per timepoint. The three input datasets share the same structure. A standard lab metadata dataset named lb_meta is available and this contains the standard unit, conversion factor for standard unit, LBTEST value for each analyte collected and also the number of decimal places expected for result of each test.
002	STUDYID	Study Identifier	Populate using STUDY variable
003	DOMAIN	Domain Abbreviation	Populate as "LB"
004	USUBJID	Unique Subject Identifier	Concatenate STUDY and PT variable values using hyphen as separator
005	LBSEQ	Sequence Number	Sort the final dataset by USUBJID, LBCAT, LBTESTCD, LBDTC and set to 1 on the first record of the subject and increment by 1 on subsequent records.
006	LBTESTCD	Lab Test or Examination Short Name.	Populate with the value from TEST variable.
007	LBTEST	Lab Test or Examination Name	Populate using LBTEST value lab_meta by merging at TEST and UNIT level (lab.TEST=meta.LBTESTCD and lab.COLL_UNIT=meta.LBORRESU)
008	LBCAT	Category for Lab Test	Populate as "HEMATOLOGY" for records coming from lab_hema. Populate as "CHEMISTRY" for records coming from lab_chem. Populate as "URINALYSIS" for records coming from lab_urin.
009	LBORRES	Result or Finding in Original Units	Populate with the value from COLL_RSLT variable.
010	LBORRESU	Original Units	Populate with the value from COLL_UNIT variable.

		Lower Limit in Orig Unit	
012	LBORNRHI	Reference Range Upper Limit in Orig Unit	Populate with the value from HIGHER variable.
013	LBSTRESC	Character Result/Finding in Std Format	1) Fetch CONVERSION value and DECIMAL value from lab_meta by merging at TEST and UNIT level (lab.TEST=meta.LBTESTCD and lab.COLL_UNIT=meta.LBORRESU). 2) Where applicable, convert the numeric component of COLL_RSLT to standard unit by multiplying with conversion factor. 3) Round the resulting value to number of decimals specified in the metadata. 4) If there exists special characters like '<', '<=', '>', '>=', concatenate these symbols back to the standard result. Same methodology is applicable for other similar variables, entire derivation logic is not repeated in other places.
014	LBSTRESN	Numeric Result/Finding in Standard Units	Refer LBSTRESC for derivation approach. Note: LBSTRESN will be left null in cases where special characters exist in LBORRES.
015	LBSTRESU	Standard Units	Populate with LBSTRESU from metadata.
016	LBSTNRLO	Reference Range Lower Limit-Std Units	Refer LBSTRESC for derivation approach.
017	LBSTNRHI	Reference Range Upper Limit-Std Units	Refer LBSTRESC for derivation approach.
018	LBNRIND	Reference Range Indicator	Derived using LBSTNRLO, LBSTNRHI and LBSTRESN. 1) For the lab tests where lower limit and upper limit are available, populate as "HIGH" if the result is greater than upper limit, populate as "LOW" if the result is lower than lower limit, else populate as "NORMAL" when result is not null. 2) For the lab tests where only lower limit is available, populate as "LOW" if result is less than the lower limit, else populate as "NORMAL" if result is greater than or equals to lower limit.
019	LBSPEC	Specimen Type	Populate with the value from SPECIMEN.
020	LBLFL	Baseline Flag	Set to "Y" on the latest record with non-missing result on or prior to SDTM.DM.RFSTDTC per LBCAT and LBTESTCD of each subject.
021	VISITNUM	Visit Number	Set to 1 when VISIT="SCREENING" Else when VISIT contains "WEEK" then add 100 to the week number (that is, WEEK 1 will have a VISITNUM of 101) Else when VISIT contains "FOLLOW-UP" then add 200 to the numeric portion of the VISIT
022	VISIT	Visit Name	Set to "SCREENING" when FOLDER="SCR" Else when FOLDER contains "Week" then convert FOLDER to uppercase Else when FOLDER contains "FU" then replace "FU" with "FOLLOW-UP"
023	LBDTC	Date/Time of Specimen Collection	Convert LBDT_RAW into ISO 8601 format.
024	LBDY	Study Day of Specimen Collection	numeric(datepart(LBDTC))-numeric(datepart(DM.RSTDTC))+ (numeric(datepart(LBDTC))>=numeric(datepart(DM.RFSTDTC)))
