

Lesson Description	SAS Video	SAS Program
		• In this lesson, we will see how to create a macro for creation of study day variables in ADaM datasets • Name of the macro: adam_make_study_day • Macro parameters: ◦ date : name of the analysis date variable for which we want to calculate the study day ◦ refdate: name of the reference date variable which is considered as day 1 ◦ studyday: name of the variable in which the calculated study day has to be stored • In this lesson, ◦ we will also see how to use append=sasautos= option to call the autocall macros ◦ we will use the previously created adam_make_date_time macro to create numeric dates from character date variables
