ROWORDER 	VARIABLE_LABEL 	METHOD 	FORMULA_FOR_CRCL_DERIVATION 
001		Cockcroft-Gault method, uncorrected for body surface area	CRCL [mL/min] = ((140-age) * weight (kg) * (0.85if female))/ (72 * SCr) Where: - SCr = serum creatinine (mg/dL; to convert from umol/L to mg/dL, multiply the umol/L value by 0.0113)
002		Cockcroft-Gault method, corrected for body surface area	CRCL [mL/min] = ((140-age) * weight (kg) * (0.85if female))/ (72 * SCr) CLCR (mL/min/1.73m2) = (CLCR [ml/min] x 1.73)/BSA Where: - SCr = serum creatinine (mg/dL; to convert from umol/L to mg/dL, multiply the umol/L value by 0.0113) - BSA can be calculated using the formula: BSA (m2) = 0.007184 * height (cm)**0.725 * weight (kg)**0.425
