

Background

- We have seen the background of RFPENDTC in the previous [lesson](#)

What do we learn in this lesson?

- In this lesson, we will see a programming approach to derive RFPENDTC variable using applicable raw date variables
- We will make use of the metadata datasets to select all the date variables across all raw datasets
- We will then build a macro variable to hold the line of code that is used for renaming the date variables to a common variable and the dataset names for appending
